Recognizing and Helping the Neglected Child

Neglect is the most common form of child abuse, but recognizing the signs, assessing the family's and the child's needs, and undertaking intervention can be difficult and complicated. This book, based on extensive research of the evidence, outlines how neglect can be recognized, examining the signs that parents give to signal their need for help, and the signs that a child's needs are not being met. It then covers how practitioners should respond, including assessment, planning, and appropriate interventions. The authors examine whether practitioners are well-equipped to recognize child neglect, and whether professional responses to help could be swifter. Finally, the prevention of child neglect is considered, and a proposal for a public health approach and early intervention is outlined. The book includes case studies and makes recommendations for policy and practice. This book will help practitioners to understand better child neglect and to improve practice in this important area. It will be vital for all those likely to encounter child neglect, including child and family social workers, health visitors, teachers with safeguarding responsibilities, nursery staff, and educational psychologists.

DNA Replication, Recombination, and Repair

This book is a comprehensive review of the detailed molecular mechanisms of and functional crosstalk among the replication, recombination, and repair of DNA (collectively called the "3Rs") and the related processes, with special consciousness of their biological and clinical consequences. The 3Rs are fundamental molecular mechanisms for organisms to maintain and sometimes intentionally alter genetic information. DNA replication, recombination, and repair, individually, have been important subjects of molecular biology since its emergence, but we have recently become aware that the 3Rs are actually much more intimately related to one another than we used to realize. Furthermore, the 3R research fields have been growing even more interdisciplinary, with better understanding of molecular mechanisms underlying other important processes, such as chromosome structures and functions, cell cycle and checkpoints, transcriptional and epigenetic regulation, and so on. This book comprises 7 parts and 21 chapters: Part 1 (Chapters 1–3), DNA Replication; Part 2 (Chapters 4–6), DNA Recombination; Part 3 (Chapters 7–9), DNA Repair; Part 4 (Chapters 10–13), Genome Instability and Mutagenesis; Part 5 (Chapters 14–15), Chromosome Dynamics and Functions; Part 6 (Chapters 16–18), Cell Cycle and Checkpoints; Part 7 (Chapters 19–21), Interplay with Transcription and Epigenetic Regulation. This volume should attract the great interest of graduate students, postdoctoral fellows, and senior scientists in broad research fields of basic molecular biology, not only the core 3Rs, but also the various related fields (chromosome, cell cycle, transcription, epigenetics, and similar areas). Additionally, researchers in neurological sciences, developmental biology, immunology, evolutionary biology, and many other fields will find this book valuable.

Molecular Mechanism of Alzheimer's Disease

Alzheimer's disease (AD) is an age-related neurological disease that affects tens of millions of people, in addition to their carers. Hallmark features of AD include plaques composed of amyloid beta, as well as neurofibrillary tangles of tau protein. However, despite more than a century of study, the cause of Alzheimer's disease remains unresolved. The roles of amyloid beta and tau are being questioned and other causes of AD are now under consideration. The contributions of researchers, model organisms, and various hypotheses will be examined in this Special Issue.

At least 5 trillion cell divisions are required for a fertilized egg to develop into an adult human, resulting in the production of more than 20 trillion meters of DNA! And yet, with only two exceptions, the genome is replicated once and only once each time a cell divides. How is this feat accomplished? What happens when errors occur? This book addresses these questions by presenting a thorough analysis of the molecular events that govern DNA replication in eukaryotic cells. The association between genome replication and cell proliferation, disease pathogenesis, and the development of targeted therapeutics is also addressed. At least 160 proteins are involved in replicating the human genome, and at least 40 diseases are caused by aberrant DNA replication, 35 by mutations in genes required for DNA replication or repair, 7 by mutations generated during mitochondrial DNA replication, and more than 40 by DNA viruses. Consequently, a growing number of therapeutic drugs are targeted to DNA replication proteins. This authoritative volume provides a rich source of information for researchers, physicians, and teachers, and will stimulate thinking about the relevance of DNA replication to human disease.

Legend Since August 2007

The moon landing was an important moment in history, but many forget what was happening behind the scenes -- discover the groundbreaking political history of the Apollo program in this riveting exploration of America's space missions. Since July 1969, Neil Armstrong's first step on the Moon has represented the pinnacle of American space exploration and a grand scientific achievement. Yet, as Smithsonian curator Teasel Muir-Harmony argues in *Operation Moonglow*, its primary purpose wasn't advancing science. Rather, it was part of a political strategy to build a global coalition. Starting with President John F. Kennedy's 1961 decision to send astronauts to the Moon to promote American "freedom" over Soviet "tyranny," Project Apollo was central to American foreign relations. From that perspective, the critical event did not just take place on the lunar surface, it took place in homes, public squares, palaces, and schools around the world, as Apollo captured global attention like never before. After the Moon landing, the Apollo astronauts and President Richard Nixon traveled the world to amplify the sense of participation and global unity shared by billions of people who followed the flight. Drawing on a rich array of untapped archives and firsthand interviews with Apollo astronauts, *Operation Moonglow* paints a riveting picture of the intersection of spaceflight, geopolitics, propaganda, and diplomacy during the Cold War.

Report, 1907-

A revelatory, fly-on-the-wall collection of photographs and stories documenting Eddie Van Halen at work in his famed but seldom seen 5150 studio, from the 2004 reunion with Sammy Hagar through the 2007 reunion with David Lee Roth. "When kids ask me how it feels to be a rock star, I say, 'I'm not a rock star. I'm not in it for the fame, I'm in it because I like to play.'" Eddie Van Halen A fortuitous call from a stranger in the middle of the night led to a once-in-a-lifetime assignment. The stranger was Eddie Van Halen. The assignment, as Eddie related it, was to "capture the truth. Show people how hard I work, because that's the truth." Having no idea where this would lead or in what form it might be shared, Andrew Bennett spent portions of the next two years relentlessly documenting everything that occurred inside Eddie's sanctuary: from rehearsals, recording sessions, and revealing conversations, to vicious arguments, a brotherly brawl, and a wild heist attempt in the middle of the night. Bennett memorialized every square foot of that sacred space, every piece of equipment, and every guitar—including Eddie's beloved Frankenstrat. Featuring more than two hundred photographs, and accompanied by intimate reflections on what the author witnessed, *Eruption* in

the Canyon presents an incomparable portrait of one of the most revered artists in history.

Somewhere between global and local, the nation still lingers as a concept. National art histories continue to be written – some for the first time – while innovative methods and practices redraw the boundaries of these imagined communities. *Narratives Unfolding* considers the mobility of ideas, transnationalism, and entangled histories in essays that define new ways to see national art in ever-changing nations. Examining works that were designed to reclaim or rethink issues of territory and dispossession, home and exile, contributors to this volume demonstrate that the writing of national art histories is a vital project for intergenerational exchange of knowledge and its visual formations. Essays showcase revealing moments of modern and contemporary art history in Canada, Egypt, Iceland, India, Ireland, Israel/Palestine, Romania, Scotland, Turkey, and the United Arab Emirates, paying particular attention to the agency of institutions such as archives, art galleries, milestone exhibitions, and artist retreats. Old and emergent art cities, including Cairo, Dubai, New York, and Vancouver, are also examined in light of avant-gardism, cosmopolitanism, and migration. *Narratives Unfolding* is both a survey of current art historical approaches and their connection to the source: art-making and art experience happening somewhere.

Fearless Entertaining

"Much research has been conducted to provide researchers and hearing healthcare professionals with updated information in regard to hearing assessments, results interpretation and case management. This ongoing research is particularly imperative to guide clinicians with optimized methods in assessing and managing pediatric patients with hearing impairment and disability. As such, tremendous research efforts have been made in determining the most optimum methods in assessing hearing using both subjective and objective tests. Since hearing loss can occur due to disrupted peripheral and/or central auditory pathway, there is also a growing interest to study children with auditory processing disorder (APD). Even though notable achievements have been observed in understanding APD, more research is required, particularly in establishing a gold standard APD test and its specific interventions. Additionally, having an objective test such as speech-evoked auditory brainstem response is beneficial to understand how speech sounds are encoded within the brainstem region in hearing-impaired children, as well as in those with compromised neural function. In this book, we have gathered research from Malaysia and India in this field and hope it will be of interest to our readers"--

DNA Replication and Human Disease

"This book is about the people I met as I crisscrossed Australia by train and plane and L-plated car: the undefeated dreamers and wild-hearted romantics, the obsessed hobbyists and beautiful failures. It is about heroes and legends, illusions, delusions and hope, and one or two men with shit for brains who ought to be locked up." As anyone who's ever read Mark Dapin's column and features in *Good Weekend* knows, he's an immensely funny, acute and vivid observer of Australian life. In *Strange Country*, he takes us on a journey through a very different Australia - a country that's eccentric, puzzling, big-hearted, small-minded, nostalgic and sometimes just plain mad. From the last travelling boxing tent to feral urban sewer rats to Vietnam Veteran bikies and the annual Parkes Elvis Festival, his writing illuminates the stranger side of Australian life in a travel book like no other.

The Resettlement Administration

Oscar Kawagley is a man of two worlds, walking the sometimes bewildering line between traditional Yupiaq culture and the Westernized Yupiaq life of today. In this study, Kawagley follows both memories of his Yupiaq grandmother, who raised him with the stories of the Bear Woman and respectful knowledge of the reciprocity of nature, and his own education in science as it is taught in Western schools. Kawagley is a man who hears the elders' voices in Alaska and knows how to look for the weather and to use the land and its creatures with the most delicate care. In a call to unite the two parts of his own and modern Yupiaq history, Kawagley proposes a way of teaching that incorporates all ways of knowing available in Yupiaq and Western science. He has traveled a long journey, but it ends where it began, in a fishing camp in southwestern Alaska, a home for his heart and spirit. The second edition examines changes that have impacted the Yupiaq and other Alaska Native communities over the last ten years, including implementation of cultural standards in indigenous education and the emergence of a holistic approach in the sciences.

The Handy Hockey Answer Book

In this inspiring biography, discover the true story of Harriet the Spy author Louise Fitzhugh -- and learn about the woman behind one of literature's most beloved heroines. Harriet the Spy, first published in 1964, has mesmerized generations of readers and launched a million diarists. Its beloved antiheroine, Harriet, is erratic, unsentimental, and endearing -- very much like the woman who created her, Louise Fitzhugh. Born in 1928, Fitzhugh was raised in segregated Memphis, but she soon escaped her cloistered world and headed for

New York, where her expanded milieu stretched from the lesbian bars of Greenwich Village to the art world of postwar Europe, and her circle of friends included members of the avant-garde like Maurice Sendak and Lorraine Hansberry. Fitzhugh's novels, written in an era of political defiance, are full of resistance: to authority, to conformity, and even -- radically, for a children's author -- to make-believe. As a children's author and a lesbian, Fitzhugh was often pressured to disguise her true nature. Sometimes You Have to Lie tells the story of her hidden life and of the creation of her masterpiece, which remains long after her death as a testament to the complicated relationship between truth, secrecy, and individualism.
